

## Department has Maximum Staff

Write a query to display the name of the department that has the maximum staff count order by department name.

Refer the below schema diagram:

joins6.sql

```
1 select department_name from department
2 full outer join staff using(department_id)
3 group by department_name
4 having count(staff_id) = (select max(count(staff_id))
5                             from department join staff
6                             using(department_id)
7                             group by department_id)
8 order by department_name;
```
