

Drag an Object

Emily, a student of AI academy has a project to design a webpage to arrange suitable items as a grid.

Before beginning the project she wants to know how to drag an object when the user clicks on it. Create a webpage and implement the draggable feature to drag an object wherever the user wants.

Apply the following constraints:

- <div> tag with id as draggable
- tag with the image provided, assume the image is in the same directory with the name "fish.jpg"
- <p> tag with the text "Drag me around"

Use the following JQuery Libraries:

1. <https://code.jquery.com/jquery-1.10.2.js>
2. <https://code.jquery.com/ui/1.10.2/jquery-ui.js>

Sample Webpage

```
drag.html  fish.jpg
1 <html>
2   <head>
3     <meta charset="utf-8">
4     <script src="https://code.jquery.com/jquery-1.10.2.js"></script>
5     <script src="https://code.jquery.com/ui/1.10.2/jquery-ui.js"></script>
6     <style>
7       #draggable{
8         width:300px;
9         height: 300px;
10      }
11    </style>
12    <script>
13      $(document).ready(function(){
14        $("p").click(function(){
15          $("#draggable").draggable();
16        });
17      });
18    </script>
19  </head>
20  <body>
21    <div id="draggable" class="ui-qidget-content">
22      
23      <p>Drag me around</p>
24    </div>
25  </body>
26 </html>
```
