

Department with Student Count

Write a query to display list of department names and number of students in that department, if student exist. Give an alias to the count as STUDENT_COUNT. Sort the record based on department name.

Refer the below schema diagram:

joins1.sql

```
1 select department_name, count(student_id) as student_count from department
2 join student on department.department_id = student.department_id
3 group by department_name
4 order by department_name;
```
