

Create Student table

Refer the below schema, and create the student table.

Refer the below schema diagram:

ddl2.sql

```
1 create table student(  
2     student_id number,  
3     student_name varchar(30),  
4     address varchar(40),  
5     city varchar(30),  
6     department_id number,  
7     constraint pk primary key(student_id),  
8     constraint fk foreign key(department_id) references department(department_id)  
9 );
```
