

Multiplier - Overloading

Multiplier class is already provided as part of the code skeleton

- Include the below overloaded methods

Method name	Arguments	Return Type	Access Specifier	Description
multiply	int, int	int	public	This method should take two integer arguments, multiply and return the result as int
multiply	int,int,int	int	public	This method should take three integer arguments, multiply and return the result as int
multiply	double,double	double	public	This method should take two double arguments, multiply and return the result as double

Strictly adhere to the problem specification

In the Driver class, that has the main method create the object Multiplier , invoke the overloaded methods and check the results.

Main method is not tested.
