

Department with Staff Count

Write a query to display the names of all the department and the staff count in each department, if there are no staffs in the department, display the count as 0. Give an alias to staff count as STAFF_COUNT. Sort the result based on department name.

(Use left join or right join)

Refer the below schema diagram:

joins5.sql

```
1 select d.department_name, coalesce(count(s.staff_id),0) as STAFF_COUNT
2 from department d full outer join staff s using(department_id)
3 group by d.department_name
4 order by d.department_name;
```
