

Display Guests stayed with Pets

The resort manager wants to know the details of the guest who brought their pet to the resort. Write a query to display the guest id, the resort id, the number of days they stayed (give alias name as numberofdays), count of adults, children and pet, their total charge incurred. Display the output in the descending order of pet count.

(Total number of days is calculated based on the difference between from date and to date)

sample.sql

```

1 SELECT guestid,resortID,(todate-fromdate) as numberofdays,
2 adultCount,childCount,petcount,totalCharge FROM booking WHERE petcount>0
3 ORDER BY petcount DESC;
    
```
