PersonIsADoctor-Inheritance

A Person class is already created.

- Include the below attribute

Name	Type	AccessSpecifier
name	String	default

A Doctor class is already created. Make the below changes

- Doctor class should be of type Person (is a relationship)
- Include the below attribute

Name	Type	AccessSpecifier
specializationType	String	default

- Include the below Method

Name	ReturnType	Description
displayDetails	String	This method should return a String <<name>> is a <<specializationType>>

Note:

Do not include any additional constructors.

Strictly adhere to the problem specification

In the Driver class, that has the main method create the object of the Doctor , invoke the displayDetails method and print the result.

Main method is not tested.
